## Hipo V1

The Diverter Hipo V-1 was designed to divert PCB panels in all directions.

The Hipo V-1 can divert panels keeping the original direction without any rotation. Can be installed in the middle of a horizontal line or at the end, according to technical or floor space requirements.

The Hipo can operate individually or can be operated by the machine it is linked to according to the customer's needs. The conveyor running speed can vary from 0.5 m/min up to 5 m/min achieving a maximum number of 4 panels per minute. The device is equipped with two sets of flat belt conveyors to minimize the friction between the panel and belts.

The Hipo is equipped with a PLC and a touch screen with an easy operator interface and can be custom programmed to meet special customer requirements.

	Length	Width	Thickness	Weight	Line speed range	
Max. Panel Size	650mm	530mm	3,4-5mm	- Kg	Panel / min	6
Min. Panel Size	630mm	530mm	0,8 mm	4Kg	Max m / min	5
					Min m/min	0,5
