

**The Pato Unloader** has been designed to unload any horizontal line where contact between panels is permitted. May be used as an outfeed of any horizontal processing line. The Unloader can accumulate a stack of 450 mm of panel height thanks to its mechanical strength.

**The unloader** automatically adapts to different panel thicknesses without the need of manual adjustment. The PCB boards go through a pair of rubber rollers raising the leading edge of the panel to minimize scratches between panels. The infeed speed can be adjusted from 0,5m/min up to 10 m/min.

	Length	Width	Thickness	Weight	Line speed range	
Max. Panel Size	615mm	615mm	3,5 mm	3 Kg	Panel / min	8
Min. Panel Size	300mm	300mm	100 µm	0,1 Kg	Max m / min	6
					Min m/min	0,5
